X-ACT "A" TYPE

X-ACT "S" TYPE

X-ACT UNIQUE DESIGN FEATURES

- Ergonomic design facilitates excellent eye to hand co-ordination.
- Efficient intra cam locking mechanism allows maintaining pressure and guaranteeing fast and automatic release. Easy deflation even at high pressures.
- Quick latch/push mechanism for gradual and rapid pressure release
- Clear fluid barrel for unobstructed view during bubble purging
- Simple operation and stable performance
- Consistent pressure output
- Single handed release capability for left or right-handed use
- Up to 30atm analog pressure range, provides stable accurate repeatable pressures.
- Available in 20ml (X-Act & X-Act "G" Type), 25ml (X-Act "A" Type) & 30ml (X-Act "S" Type)

INSERTION TOOL:

Guide Wire Insertion Tool is precisely designed for use during PTCA and any other intravascular therapeutic procedures that utilize a guiding catheter.

This provides a mean for inserting guide wire deep into the vasculature.

- Compatible for 0.010" to 0.016" guide wires.
- Needle Length: 100mm
- Inner Diameter: 0.63mm

TORQUER:

Guide Wire Torquer is precisely designed for use PTCA and any other intravascular therapeutic procedures that utilize a guiding catheter.

This provides a mean for maneuvering guide wires once inserted deep into the vasculature.

Compatible for 0.010" to 0.016" guide wires.

Y-CONNECTOR:

Y Connectors are precisely designed for use during PTCA and any other intravascular therapeutic procedures that utilize a guiding catheter.

Guide wire compatibility 7/8/9 F & pressure rating up to 170 psi

Types of Y-connectors:

a. Y-connector Screw Type

- Large closing knob makes twisting and valve closing easier
- Minimum blood loss

b. Y-connector Push Pull Type

- Simple push mechanism allows single handed operation to open & close valve.
- Rapid, efficient & excellent Ergonomics
- Minimized backflow, limiting blood loss

c. Y-connector Click Type

- Ergonomic designed provides easy maneuvering and significantly reduced blood loss

d. Double Y-connector

- Different valves make it easier to distinguish and operate the two guide wires
